

HI-FIVE L.E.D. BULB REPLACEMENT INSTALLATION INSTRUCTIONS

Thank you for choosing Pacer Performance Products.

We have recently incorporated a design change to improve product quality and provide brighter, more reliable and longer lasting Hi-Five Cab Roof Lights. This new design allows you the option of using either incandescent or L.E.D. bulbs as they both share common sockets, depending on your preference.

INSTALLATION

1. Holding one of the Hi-Five Lights, grasp the bulb socket and twist counterclockwise to release it from lens.
2. Once removed, lightly pull the 194 Bulb from the socket with a slight wiggling motion.
3. Press in the new 194 L.E.D. replacement into the socket with a slight wiggling motion.
4. Repeat steps for remaining lights.
5. Test the Hi-Five Lights to ensure the new L.E.D.'s are installed with the proper polarity. If the L.E.D. does not illuminate, remove & reinstall rotating the connection 180°.
6. Reinstall socket twisting in a clockwise rotation.
